

NextServer X Rackmount

Quick Start Guide

08/20/2020

1 Network Configuration

Before capturing packets, some initial configuration is required.

A VGA display and USB keyboard are necessary at first for locally configuring the network. An Ethernet connection to an onboard gigabit interface is also required.

Note: By default the management Ethernet port is pre-configured for DHCP. If a static IP is needed, you will need to set this during the quick start process.

- 1. Provide a network connection for remote access to server

Provide an Ethernet connection to Management Port as shown in figure (a).

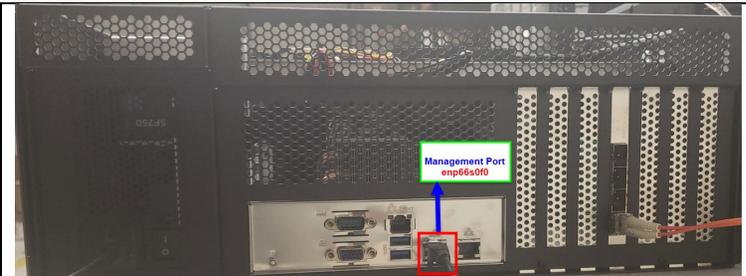

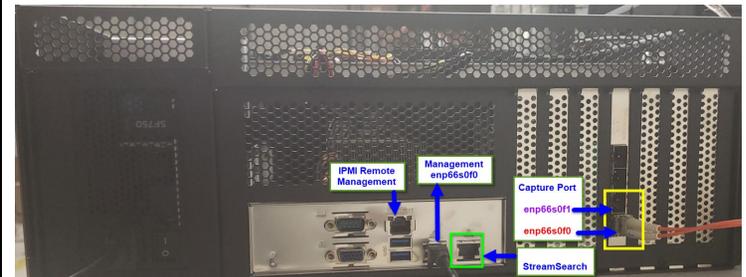

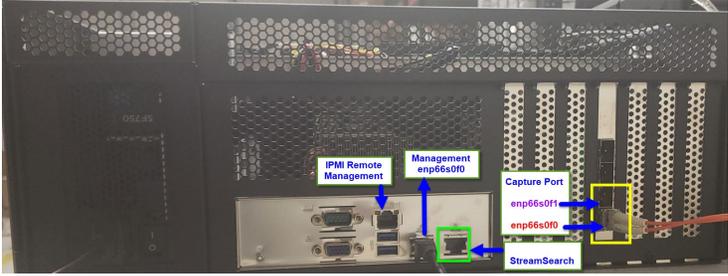

figure (a) Management Port

Back Panel for reference

<p>2. Provide network connection(s) for network capture.</p>	<p>Provide capture network connection to the Capture Port(s) as shown in figure (b).</p> <p>Note: Make sure there is traffic being generated over the connections.</p>	 <p>figure (b) Capture Interfaces</p>  <p>Back Panel for reference</p>
<p>3. Log in</p>	<p>After booting the system to the OS, login with the following user information: User: <i>continuum</i> Password: Contact Support for password</p>	
<p>4. Record the IP Address</p>	<p>Once logged in, open a terminal and enter: #ifconfig This will provide the IP address of the Ethernet port currently connected. Record the IP address.</p>	<pre>eth0 Link encap:Ethernet HWaddr 00:00:00:00:00:00 inet addr:192.168.1.1 Bcast:192.168.1.255 Mask:255.255.255.0 UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1 RX packets:276 errors:0 dropped:0 overruns:0 frame:0 TX packets:89 errors:0 dropped:0 overruns:0 carrier:0 collisions:0 txqueuelen:1000 RX bytes:36178 (35.3 KiB) TX bytes:19011 (18.5 KiB)</pre>
<p>5. Test connection</p>	<p>To test the connection, ping your internal network or login remotely via SSH on port 22. If there is a successful connection, please go to part 2 of this guide. If not please contact support.</p>	

2 Start Recording

Now that there is a successful network and/or cluster connection to the system, it is time to begin recording network packets to disk. Using the web interface, the user can begin recording and view statistics about traffic on a network.

<p>1. Start the web interface</p>	<p>Remote Access: On any remote system connected to the network, open a web browser (Chrome preferably) and enter the IP address of the system followed by the port# 41395 in the form: <a href="https://<IP Address>:41395">https://<IP Address>:41395</p> <p>Local Access: On the VM, click on the Application tab and select internet. Open a web browser (Chrome preferably) and enter <a href="https://<localhost>:41395">https://<localhost>:41395</p>	
<p>2. Log in:</p>	<p>Now you should see the login screen. By default, a "continuum" account has already been created.</p> <p>Enter "continuum" for the UserName, and <i>contact support</i> for the Password.</p>
